How can I fix the sound problem?? A: Realtek ALC880(D) @ Intel 82801FB ICH6 - High Definition Audio Controller [B-1] Driver from the description that you wrote doesn't work, it's not the same device as the driver that you have already installed. If you have ALC882 or ALC883 HD Audio Controller it should work, but if you have ALC880 you should take the driver for these two controllers - This is because the driver has to be the same in all Windows versions. EDIT: I googled for this driver f678ea9f9e
